When his colleagues heard his plan, they expressed their _____ (4) of what could happen to him. They told him that he was taking a foolish risk and reminded him of how easy it was to catch the disease even if one was well _____ (5).

SECTION THREE. READING COMPREHENSION.

/ 10 marks.

Read the passage below carefully then answer the questions below

Jobs of the future.

Today, half the world's population lives in cities, and that number is growing. By 2050, cities will be home for three quarters of the world's people. By 2040, fifty percent of the world's youth will be African and for the first time in history, the majority of African youth will live in cities. It is therefore urgent that jobs be created for this young urban workforce. But what and where will the jobs of tomorrow be? Job market research projected for the next decade shows growth in some industries and sectors and decline in others. It is always difficult to predict economic trends, but here are a few areas that may offer important employment opportunities in the future.

The Information and Communication Technology (ICT) sector could create around 150 million new jobs by 2020. Activities like buying, selling, insurance, banking and other services are already moving online. As online business increases, this will create opportunities for skilled ICT workers. The public sector will also rely on the Internet. In Ghana, for example, a new e-government project for online public services is going to create jobs for ICT workers. They will enter data, set up and oversee websites. The video and film industry, which are growing in both Nigeria and Ghana, will need ICT technicians skilled in computer generated imagery to create characters and special effects for films.

Forecasts show that the energy sector is set to grow fast. As oil becomes rare and more and more countries develop renewable energy to reduce CO2 emissions, there will be many job opportunities in this sector for both skilled and unskilled workers. Solar power, wind power and biogas plants are the energy sources of tomorrow, and they will require engineers, technicians and people to plan, install and maintain the systems.

Another sector which should expand is tourism. With its amazing scenery, unique wildlife and cultural variety, the African continent has much to offer tourists. Governments and companies must invest in attractive tourists products- wildlife and cultural tours outdoors activities, and quality hotels. Countries like Kenya, Tanzania and Namibia already attract millions of tourists annually. Other countries plan to develop similar models which create different work opportunities from hotel managers, interpreters, guides and a host of different services to improve the tourist's experience.

QUESTIONS

1. Why are economic trends hard to predict? / 2 marks.

2. Which economic sectors will offer job openings in the future? (at least two) / 1 mark.
